Drinking water meters: Don't install meters

Let us know why: The main problem with the water reticulation is leaks. I believe this statement can be backed up by reading the usage at 3 am during the period of covid. Usage should have been almost nil as industry was shut down and the public was asleep. A huge number of leaks never come to the surface due to the pipes being laid in pea gravel that acts as a field tile to take the water away into the ground. There are a number of metres in the network that, if read would show the areas that need to be checked for leaks. Water meters on property will be helpful if they are read. I know of people with life style blocks on town water that irrigate full time during the summer ,they have water meters that they know aren't being read so have no intention of stopping. I suggest staff use the tools they have and start dealing with these people . We wouldn't be looking at installing meters if the staff are doing their job. Total waste of money

Elderly Persons Housing:
